Experience

Software Engineer Vancouver, Canada	TrustFlight [Aviation Software Solutions]	Feb 2025–Now (1 yr)
• Led end-to-end external integrations efforts, spanning API discovery, solution architecture, development, testing, and go-live, while serving as the technical liaison for non-technical clients, enabling seamless partner integrations between TrustFlight's Tech Log and other aviation software • Redesigned existing Temporal-based workflow orchestration platform for higher scalability and robustness, focusing on strong type safety with Zod and boosting AI-assisted debugging performance • Established documentation standards and built LLM-powered automations for technical guide generation, which reduced out-of-date documentations and onboarding and support overhead • Developed a JSON object transformation library with customizable field mappers and sandboxing for XSS prevention		
Software Engineer / Tech Lead Vancouver, Canada	Aupera Technologies Inc. [On-premise Video AI Solutions]	Mar 2023–Oct 2024 (1.5 yrs)
• Led a cross-functional team of 5 engineers, enhancing team productivity with pair-programming and mentorship • Scaled an open-source vector database to support terabytes of video stream data, improving search efficiency • Led backend development including semantic search, LLM agents, REST APIs, IdP, DRM, and Docker deployment • Automated the full lifecycle of an on-premise MLOps pipeline for a major client, minimizing redeployment costs • Reduced testing time for a live video streaming framework by 90% with a self-hosted CI pipeline (GitHub Actions)		
Researcher Vancouver, Canada	Simon Fraser University	Jan 2021–May 2023 (2.5yrs)
• Published my work at ESEC/FSE 2023, a top tier software engineering conference (Link) • As part of my research, developed a tool to measure and visualize proposed coverage criteria in Typescript (Link)		
Software Engineer Tehran, Iran	Yektanet [Largest AdTech Platform in Iran]	Dec 2019–Dec 2020 (1yr)
• Scaled a Python/Django push notification ads service from 5M to 100M daily pushes, driving a 15x revenue increase • Optimized PostgreSQL and Redis databases with 40M+ users, reducing critical query times by 80% • Halved debugging time by implementing observability with Elasticsearch, Kibana, Logstash and Grafana dashboards • Launched the company's public engineering blog, increasing inbound engineering candidate interest • Contributed to hiring by interviewing candidates, mentoring 3 interns, and reviewing +100 screening tasks		
Full Stack Software Engineer Tehran, Iran	Pheebz [Mobile App Development Studio]	Sep 2017–Dec 2019 (2yrs)
• Developed Node.js backend code for two mobile apps with combined 350k installs, from design to deployment • Created a schema-based, type-safe API-generation tool, adopted by 4 products internally reducing API bugs		

Skills

Languages: Python, TypeScript, JavaScript, GraphQL

Databases: MongoDB, PostgreSQL, Redis, Firebase

Cloud Services: AWS, DigitalOcean, Cloudflare, S3, GCP

Orchestration and CI/CD: Docker, GitHub Actions

Frameworks: Node.js, Django, React, FastAPI

Other: Git, REST, HTML, CSS, Web Sockets, Temporal, Logstash, Kibana, Grafana, Sentry, Pydantic, Zod

AI: Agent Skills, RAG, Langchain, Vercel AI SDK, Chroma

Recent Projects

- [Mindmap.io](#): Keyboard first mindmap tool with agentic capabilities 2025-Now
- [ganji.me/vibe](#): my experimentations with agentic coding, all fully coded by AI agents 2025-Now
- [Braindump](#): Local memory skill for AI agents, allows persisting and fast searching of text via CLI 2026
- [Credi](#) is 100% coded by AI, built for Code With Kiro Hackathon by AWS and won the blog post prize 2025

Education

- **M.Sc. Computer Science**, Simon Fraser University; Vancouver, Canada. 2021–2023
- **B.Sc. Computer Science**, University of Tehran; Tehran, Iran. 2015–2019
